Hi

Many thanks for supporting our project.

It takes 200 kg of tags or 450 kg of plastic bottle tops from milk, juice and cold drink bottles to get enough money to buy a wheelchair, but they go to different destinations and must be kept separate please. You do not need to collect the entire amount unless you specifically want a wheelchair for a certain person. If this is the case, you can also send them in in small quantities but please keep a tally of the weight of what you send in each time. We do not need them to be counted but they must please be checked for other foreign objects as these can damage the grinding machinery at the plant where they are reused in the manufacture of seedling trays.

You can collect them in whatever container you prefer, but not in plastic bottles please as it is very hard to get them out of them. The boxes from reams of paper work very well as receptacles. You can look for the collection point closest to you on the [interactive map](#) on our website or contact us. If you would like your collection point to be on the map you can complete the form on the website.

Please encourage everyone to like, friend and share our [Facebook page](#) as this helps to spread the word even further.

Do let me know if you have any other questions.

Best wishes

Lorna
